

## ENWIS BI - Business Intelligence - Customer Portal

The Business Intelligence (BI) Customer Portal was designed as a Reporting & Metric tool to be accessed by users both internal and external to an organization. There are portal controls that allow internal users the ability to provide external users access to specific information and external users with the ability to allow their site managers to access their own individual information as well.

This allows Internal Users to access Financial, Sales, and Waste & Recycling Information to review metrics such as:

- Profit & Loss by Equipment
- Services
- Vehicles
- Waste Streams
- Contracts
- Customers
- Sites
- Routes

And this also allows for External Users downstream to access:

- Invoicing Data / Images
- Route Pick-Up Data
- Company News
- Sustainability & Diversion Info

And the ability to be able to review any of these metrics by:

- Site
- Location
- Department
- Service
- Waste Stream, and others...

### Learn More

#### [Login & Exploration - Video](#)

- ○ Internet Web Browser Login & Initial Screen Exploration

#### [Waste & Recycling Metrics - Video](#)

- ○ Customer & Divisions with Services Grouped by Time Periods
- ○ Metrics of Location Sites, Material Tonnage, Service Cost & Revenue, and Services Group breakdowns
